Examples of elements include iron, oxygen, hydrogen, gold, iron, iron, The elements are made of small particles called atoms. The atoms of a given element are identical in size, mass and other properties. The atoms of different elements differ in size, mass and other properties. Atoms cannot be divided, created or destroyed. The atoms of different elements are combined in simple whole numbers to form chemical compounds. In chemical reactions, atoms are combined, separated or reorganized. For example, according to his theory, water is formed when hydrogen and oxygen combine as under the theory of J.J. Thompson - the English physicist proposed the model of atom plums in 1904, after the discovery of electrons in 1897. Its model was based on its results which stated that an atom has a positively charged spherical structure in which negatively charged electrons are studded as fruits in a plum pudding. He also said that the positive charge quantity of the ball is equal to the amount of negative charges of electrons. Rutherford’s hypothesis - In 1911, New Zealand physicist Ernest Rutherford experimented to test the plum pudding model with his students Hans Geiger and Ernest Marsden. They directed a ray of alpha particles (a type of positively charged radiation) to a thin gold foil. Most of the radiation passed through the foil, few particles were deviated from large angles, and less they returned from the foil to 180 degrees. They concluded that - Most of the space within an atom is empty. There is a positive charge concentration in the atom (since as charges repulse). The mass of the atom and its positive charge is concentrated in a small volume (i.e. the nucleus). Bohr Theory - In 1913, Neils Bohr proposed that an atom be a system made up of a smalldense and well loaded surrounded by negatively charged electrons around it. This structure is similar to the solar system. It says that an electron rotates in a given id ocimota oremun li ,1 "Á onegordI otnemele'lled ocimota oremun li ,oipmese reP .ocimota oremun ous li "Á otnemele nu id omota nu ni inotorp id oremun II - REBMUN CIMOTA - onos anredom acimota airoet alled evaihc ittecnoc ied inuclA ,inotorp id oremun orol li onos onodividnoc otnemele osselts olled imota ilg ittuT ehc elatnemadnof acitsirettarac aL ,isrevid onos isrevid itnemele id imota ilg etrtnem ,issets ilg onos otnemele nu id imota ilg ehc amreffa anredom acimota airoet aL ,2391 len kciwdahC semaj rIS ad enif alla itrepcocs onoruf inortuen i aM ,0291 len imota ilged itelcun ten ertuen ellectrap id azneserp al ehcna ~Áreggus e inotorp emoc etnemavilsofp etacirac ellectrap el ~Árposc drofrehitru tsenrE ,7191 leN !aredised is otnemogra isaislauq us otuia erenetto e rotut nu erartnoci rep ATUTARG enoisses anu eramargorp atsaB ,otsiuqa id ogilbbo nussen ,atseihcir otiderc id atrac anusseN ,ELAIKT ATUTARG enoisses anu erednerp ,ittecnoC i erarapmi rep o adnamod isaislauq a inoizulos/etsopsis reP ,atseihcir otiderc id atrac anussen ,otsiuqa id ogilbbo nussen ,ATUTARG erpmes "Á enilno girotrut id enoizel amirp aL ,oraned id osrobmir id aiznarag anu noc ottut li ,Janosrep ammargorp id iraro irtsow ia enilno girotrut id inoizel eracifinaip elibissop Á ,PA e EESI ,TCA ,TAS ,TASS ,PAM ,TAGoC ,TACS emoc itazzidradnats tset rep otuia perP tset ,21-K sedarG rep bew lus etneinevnoc eno-no-eno evil girotrut anu erffo dIroWrotuTe ,asac ad erarapmi id azneinevnoc al e ilbissif immargorp ,itazzilanosrep enotzel id inaip id oiggatnav li ehcna omairfFO ,onu a onu evitaretni inoisses osrevarta itnemogra ilg errettaba azneics id rotut isprehe irtson I ,dIroWrotuTe a girotruT azneicS ollevil "Á 5 li noc itnatropmi itnemogra irtla e acimotA airoeT allus 'Áip id irpocS ,arta'lla atibro'nu ad atsoips is enorttele nu odnauq asemme o atibrossa enev enoizaidar aL ,aigrene de atatsopmi enoisnemid anu ah ehc oelcun la onrotni atibro ,otilos ,otilos id ,omota'lled assam id oremun li atamaihc "Á oelcun len inortuen e inotorp id oremun led elatot ammos aL - REBMUN SSAM ,8 "Á onegisso id ocimota oremun li e 6 "Á number of electrons in an atom is the same as the number of protons. ATOMIC SYMBOLS eÁÁÁ Every element has been given a symbol for the sake of simplifying their representation. It consists of one or two letters abbreviated from their names, the first letter is in the capital and the second in lower case. For example: Á ÁIt is a special chart in which elements are grouped and placed together based on the ascending order of their atomic numbers. Try to spot Carbon (C), Oxygen (O), and Iron (Fe). All matter is composed of atoms. All atoms are composed of protons, neutrons and electrons. 3. Each element has its own atomic number which is equal to the number of protons in its nucleus. 4. Elements are represented by an atomic symbol. 5. The periodic table is a chart that organizes all the known elements. AnÁ Á is a pure substance that is made from a single type of atom. The positively charged particles in an atom are found in the nucleus and are known as \_\_\_\_\_. J.J. Thompson'sÁÁÁs model of an atom that stated that electrons are scattered in a positively charged sphere was known as the \_\_\_\_\_ model. The number of protons in an atom of an element is its \_\_\_\_\_. Element Protons Orbits Plum Pudding Atomic number No credit card required, no obligation to purchase.
